

Special Instructions for Windows 8 devices

1. Get the Nook app from the Windows Store... **(a)** if using touch screen — swipe left from the right side of the screen to bring up charms; **(b)** If using a mouse, bring the mouse to **RIGHT ABOVE** the time/date section of the task bar on the bottom of the screen, and the charms will appear; **(c)** if using your keyboard, press and hold the Windows logo key and the letter “c” key. Once the charms appear, select the search option, and type in "Store". The Windows app store will come up, click, and simply search for "Nook". Download to proceed.
2. After downloading and launching the Nook app, you'll be presented with the option to sign in with either your Microsoft Account, or a Nook Account. Be sure to sign in with a **Nook account** -- not the Microsoft account. (You might be required to create a new Nook account at **bn.com** and not through the app itself.)
3. At this point, proceed to step 4 in the regular procedures of this guide.
